

Skinstorm by Crystal Clear

Patient Information

What is Skinstorm by Crystal Clear?

Harnessing the power of six elements to treat a vast array of skin concerns, Skinstorm is Crystal Clear's most intensive all-in-one skin resurfacing treatment system yet. By combining the most advanced, non-invasive technologies available today in to one platform, Skinstorm delivers unrivalled cleansing, healing, rejuvenating, resurfacing and restoration for skin to reveal a brighter, firmer, plumper and more even complexion.

How does Skinstorm by Crystal Clear work?

Crystal Clear Skinstorm delivers enhanced penetration of active ingredients thanks to the synergistic effects of key elements. The formulations allow various active ingredients to penetrate deep into the skin, influencing collagen production and collagen quality. Meanwhile, other active ingredients work on the surface and upper layers, keeping skin hydrated and the skin's barriers optimised for protection. Cold temperature treatments are important for soothing skin and delivering oxygen effectively, helping to calm the skin whilst providing the desired, non-stressed stimulation. During highly active treatments, it is important to avoid triggering stress responses in the skin, as these can cause problems after treatment.

What are the six elements that make up the Skinstorm?

The system offers unrivalled non-surgical results by combining six cutting edge elements in one single device. Depending on the type and area of the skin concern, the following technologies are utilised to create a truly bespoke and tailored treatment programme-

1. Vacuum cleansing and oxygenation to deeply cleanse
2. Microdermabrasion resurfacing combined with phototherapy to resurface and heal
3. Peel with dissolvable oxygen to hydrate and revitalise skin
4. Microneedling to stimulate cellular processes, boost collagen and firm skin
5. High-pressure hylo fusion filler delivering FGF-10 serum to the skin's upper layers to plump skin
6. Trifusion triple light phototherapy to repair and stimulate skin

Which Skinstorm affects do you offer?

Coppergate Clinic offers the following, comprehensive range of Crystal Clear Skinstorm treatments-

- Express Facial - quick and effective skin boost
- Ultimate Facial - super-charged, intensive pick-me-up
- Acne Attack Ice Facial - long-term improvement, treating at source

Is the procedure right for me?

As every client's body, skin and goals are unique, a detailed consultation with one of our expert aesthetic therapists is essential prior to undergoing any advanced non-surgical treatment. During the consultation, your aesthetic therapist will discuss any problem areas, desired improvements, available options (including no treatment at all) and expected outcomes. A thorough medical history will be recorded, and photographs taken to document your starting point prior to treatment. Skinstorm microdermabrasion is suitable for the majority of patients, aside from those with active acne. Patients who have undergone Botox treatment should wait 14 days before going on to have Skinstorm treatment and those who have undergone treatment with Dermal Fillers should wait for 1 month before having Skinstorm.

Treatment sensation and downtime

Skinstorm treatments are non-invasive and completely safe and painless, with the majority of patients suggesting that they are wonderfully relaxing. Following treatment, skin may appear slightly flushed. This tends to subside very quickly.

Aftercare

Following a Skinstorm treatment, patients should avoid undertaking any other facial treatments within 48 hours, as well avoiding heat treatments such as saunas or steam rooms. For the initial 24 hours after treatment, patients should also avoid perfumed products, self tan or heavy makeup application and refrain from touching the treatment area as the skin's pore may be more prone to infection. Patients are encouraged to drink plenty of water to flush away any toxins released during treatment.

Results

Following a Skinstorm skin resurfacing treatment, patients can generally expect deeply cleansed, brighter, smoother more even skin, with fewer impurities and imperfections. Skin will feel firmer, plumper and lifted. Each of the Skinstorm treatments offers a slightly different range of benefits, which will be discussed thoroughly at the consultation stage.
